## Bridge between analog and digital

**Taking notes during meetings is a difficult task, not to mention exchanging notes afterwards. Stop wasting time copying each other notes and simply use this convenient solution during your following meetings to share notes efficiently.**

Converting analog notes into digital files has been a matter of frustration in meeting situations for way too long. Classic whiteboard and flipcharts require you to copy the text by typing it over or taking photos. These are automatically saved in your personal library between all your family photos. In order to share them with other participants, you have to mail them one by one or save them on a USB stick. Too much hassle and time loss. i3-Technologies has responded to this problem and developed a unique whiteboard and corresponding app to bridge the gap between analog notetaking and digital sharing. The result is i3SNAP, a convenient solution that digitizes analog notes, so you can easily share them

with participants inside and outside the meeting room.

All it takes is an i3SNAP whiteboard, markers and the corresponding mobile app. Write on the whiteboard using the markers and then use the app to take photos of your notes. The app automatically optimizes the quality and format of the photos, so they can be easily shared afterwards. An integrated calendar instantly adds a list of the meeting participants through Outlook. Easy as can be!

You probably wonder: why not digitizing the entire process of notetaking? Well, analog notetaking is cheaper, more flexible and more natural than digital notetaking. In addition, you can attach post-its or newspaper articles to the whiteboard to complement your notes. As soon as the app has digitized your notes, they are ready to be shared.
